E-blocks™ Quad 7-segment display

Quad or single digit display
EB008

- E-blocks compatible
- Low cost
- Quad common anode displays
- Flowcode macros for driving this device are available

1	E-blocks common anode connector
2	E-blocks cathodes connector
3	Quad 7-segment displays
4	Single display jumper
5	Power connector

This quad 7-segment display can be used directly with two E-blocks ports to provide a high brightness 4 digit numerical display. If only a single digit is needed a jumper is available which obviates the need for the anode control port.

This device is fully supported from within Flowcode which allows those with no programming experience to design complex electronic systems.

A technical datasheet which explains how this device is controlled is available with each purchase.
