- RS232 communications between processors and a PC
- Facilitates use of third party RS232 devices
- Flowcode macros available

This E-block provides an RS232 interface which can be used to facilitate communication between PICmicro microcontroller and third party devices like PC serial ports, mobile communications systems etc. Flowcode macros for driving this E-block are available.

A set of jumper links are available which allow the RS232 E-blocks to easily be set for all PICmicro® microcontroller USART ports.

Flowcode macros that make this device easier to use are available.

This board is part of the E-blocks ™ family of products:

1. E-blocks downstream connector
2. PC interface
3. RS232 interface for third party devices
4. Link selection for RTS, CTS, RX and TX
5. MAX232 device
